- II. Claims 1,6-13 drawn to a method of inducing apoptosis in mammalian cancer cells comprising exposing cancer cells to an anti-DR5 receptor antibody, classified in class 435, subclass 7.23.

Art Unit: 1642

- III. Claims 14-15 drawn to a method of treating cancer in a mammal comprising administering an anti-DR4 receptor antibody, classified in class 424, subclass 143.1.
- IV. Claims 14,16 drawn to a method of treating cancer in a mammal comprising administering an anti-DR5 receptor antibody, classified in class 424, subclass 143.1.
- V. Claim 17 drawn to a composition comprising an agonistic anti-Apo-2 ligand receptor antibody and CPT-11 in a carrier, classified in class 530, subclass 387.1.

---

The inventions are distinct, each from the other because of the following reasons:

The inventions of Groups I-IV are *materially distinct* methods which differ at least in objectives, method steps, reagents and/or dosages and/or schedules used, response variables, and criteria for success. Likewise, the inventions of Groups V and VI represent *materially distinct* products with different classifications.

The inventions of Groups V and Groups I-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (I) the

Art Unit: 1642

process for using the product as claimed can be practiced with another materially different product or (ii) the product as claimed can be used in a materially different process of using that product [see *MPEP* § 806.05(h)]. In the instant case the antibody product as claimed can be used in a materially different process such as affinity chromatography.

The inventions of Groups VI and Groups I-IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (I) the process for using the product as claimed can be practiced with another materially different product or (ii) the product as claimed can be used in a materially different process of using that product [see *MPEP* § 806.05(h)]. In the instant case the kit /antibody product as claimed can be used in a materially different process such as affinity chromatography.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper. Furthermore, because these inventions are distinct for the reasons given above and the search required for one group is not required for another group, restriction for examination purposes as indicated is proper.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the

Art Unit: 1642

application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
